<b>Peptide Reconstitution:</b>	Use 1.0% NH <sub>4</sub> OH as the solvent, followed by buffer (i.e. 1X PBS). Add 1.0% NH <sub>4</sub> OH directly to the lyophilized peptide powder (add 35-40 μl to 0.5 mg peptide or 70-80 μl to 1 mg peptide). The peptide cannot be stored long term in 1.0% NH <sub>4</sub> OH, and it is therefore important to immediately dilute this solution with 1X PBS or other buffer to a concentration of approximately 1mg/mL or less. Gently vortex to mix.	
<b>Storage:</b>	Peptide is shipped at ambient temperature. Upon receipt, store lyophilized powder at -20°C or lower. Reconstituted peptide should be aliquoted into several freezer vials and stored at -20°C or lower. Do not freeze thaw.
